

# PureHydrate RO+

## Compact High Purity Reverse Osmosis System with AlkaHydrate Filter

**Handbuilt in Sydney**  
with local,  
USA & UK components

**Easy Maintenance**  
with hygienic  
"twist off" cartridges

**5 Year Warranty\***  
handbuilt &  
wet tested before sale

## 4 Stage Filtration Process

- 1 Carbon Pre-Filter** Made in USA  
Removes chlorine, pesticides, heavy metals and other organic pollutants.
- 2 Ultrafine TFC RO Membrane** Made in USA  
Screens to 0.0005 micron, filtering viruses, bacteria and parasites. Repels heavy metals and removes Fluoride and Hydrocarbons.
- 3 Coconut Carbon Post-Filter** Made in USA  
Final polishing filter results in superb tasting, pure water.
- 4 AlkaHydrate Filter** Made in USA  
Alkalisng and mineralising filter - effectively raises pH levels and lowers ORP (Oxygen Reduction Potential).

## Benefits of Reverse Osmosis

### High Purity

Effectively removes contaminants like heavy metals, fluoride & bacteria.

### Enhanced Palatability

Eliminates undesirable tastes and odours.

### Improved Safety:

Reduces exposure to harmful toxins and pollutants.

### Efficient

Provides purified water without the need for bottled alternatives.

### Economical

Reduces long-term costs compared to bottled water.

### Sustainable

Minimizes plastic waste through reduced bottled water use.

Since 2009, Whole House Filtration Toowoomba, part of The Water Cooler Guys, has provided tailored solutions for clean, safe, and great-tasting water, backed by over 16 years of expertise.

*\*Warranty Terms & Conditions apply.*

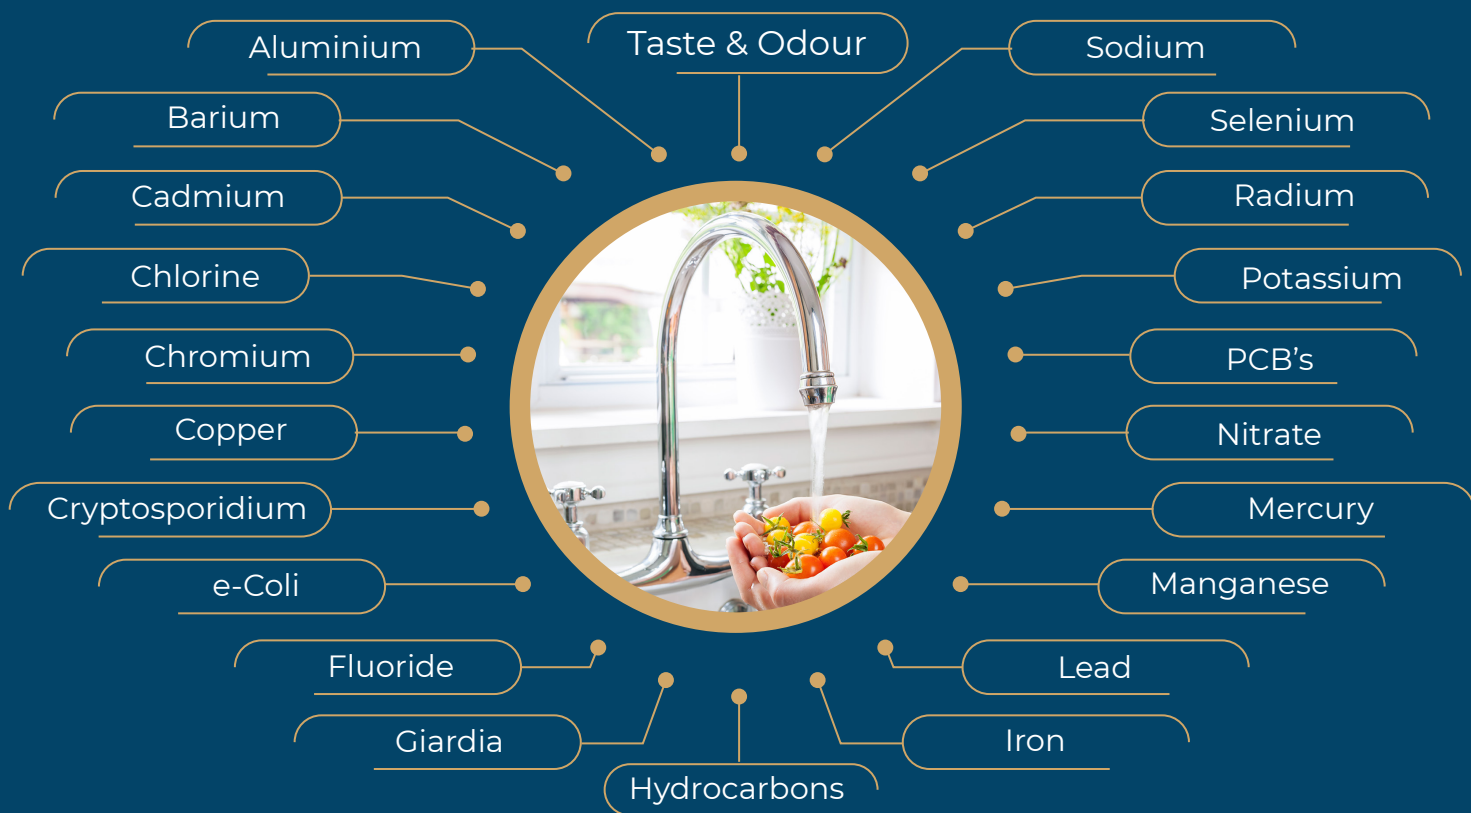

DIY maintenance : easy to unscrew, the hygienic cartridges ensure maintenance is straightforward and economical. Replace only the Carbon filter and the AlkaHydrate filter annually. The Reverse Omosis Membrane lasts 3-5 years.

Impurities are flushed down the drain rather than collected in the filters.

This system includes a tank storing approximately 10 litres of pure water to dispense on demand.

## Among the many contaminants removed:

## Ultra High Purity Reverse Osmosis with AlkaHydrate

### HOW DOES IT WORK?

Reverse osmosis (RO) uses mains water pressure to push water through a semi-permeable membrane with pores as small as 0.0005 microns. Pure water molecules pass through, while larger contaminants (e.g., salts, heavy metals, bacteria) are rejected and flushed away. The resulting water is then processed through an alkalizing and mineralizing filter, which effectively raises the pH levels and lowers the Oxygen Reduction Potential (ORP), enhancing the water's alkalinity and antioxidant properties for better health benefits.

# STANDARD FILTERED WATER FAUCET

# DELUXE 3 WAY STAINLESS STEEL FAUCETS

These dual-function mixer taps lets you have filtered water on one side and regular hot/cold water on the other, without needing to drill an extra hole in your benchtop. An additional cost applies for these models.

## About the AlkaHydrate Filter Cartridge

### Raises pH Level

A series of different medias are used to effectively raise the pH level of your drinking water. Alkaline water helps our body dissolve and dispose of acid wastes naturally.

### Adds Natural Minerals

Introduces natural, ionic minerals such as Calcium, Magnesium, Potassium and more. These are absorbed by the body to improve strength and function of body processes.

### Lowers ORP

Significantly increases the negative ORP (Oxygen Reduction Potential) enabling it to decrease the oxidation of substances or cells, thus serving as a potent anti-oxidant.
